***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1- 10, drawn to a floating type brake disc assembly having a pin connection structure, classified in class 403, subclass 408.1.
  - II. Claims 11- 20, drawn to a method of connecting a floating type brake disc assembly by pins, classified in class 29, subclass 525.05.
2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as the hollow pins could be caulked radially outward by axially pressing a punch tool into the hollow space of each pin, deforming the sides of each pin radially outward.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
